

PM-1015-FDDT Erosion Mask for Forward Down Datron Transco Antenna Enclosure

Two PM-1015-FDDT Erosion Masks are joined together and mounted on a common hard plastic support form. (Refer to Fig 1) After separation, they will protect the leading edge of two antennas.

The thin film can be cut with a sharp blade before removing the staples. If preferred, they can be divided by cutting with scissors after the staples are removed and the joined masks lifted from the hard plastic.
