FOLLOW THESE INSTRUCTIONS:

Thank you for applying a P.M. Research erosion protective mask. With proper inspection and maintenance, this mask will provide years of effective erosion protection for your aircraft and keep your aircraft looking nice. Please follow the guidelines below:

1. Clean and wax periodically as required.

We recommend that you use full strength Knight's Spray Nine® or full strength Mr. Clean® to clean the mask. Use a non-silicon based paste wax after each cleaning.

Please note: Most waxes have a small amount of silicone to improve the shine. These are OK! It is the silicone based waxes that must be avoided.

2. The user should determine an appropriate schedule to check for damage (i.e. cuts, blisters, perforations, edge lifting, etc.)
3. At the first sign of damage, the mask should be replaced with the best erosion protection available...**A genuine P.M. Research protective mask.**
